

COMSATS University Islamabad, Abbottabad Campus

Department of Computer Science

Course: Mobile Application Development (CSC303)

Date: May 11, 2026

Exam: Lab Mid Term

Duration: 180 minutes

Objective

Students will demonstrate their ability to create a Flutter project and design a **basic user interface (UI)** using the **Material library** and **core widgets**.

Task Description

1. Create a new Flutter project

- You may use either the **command line** (flutter create) or **Visual Studio Code**.
- Ensure the project runs successfully on your chosen device/emulator.

2. Develop the UI for a basic application of your choice

- The app can be simple (e.g., profile page, product catalog, gallery, or form).
- Focus on **UI design and widget usage**, not backend logic.

3. Use the following core widgets and layout patterns:

- **MaterialApp**: entry point of the app.
- **Scaffold**: app structure with:
 - AppBar
 - Body
 - Drawer
 - Bottom Navigation Bar
- **Basic UI elements**:
 - Text
 - Icon
 - Image
- **Layout widgets**:
 - Row
 - Column
 - Stack
 - GridView

4. Apply styling and arrangement

- Use properties like padding, margin, alignment, and color.
- Ensure the UI is **clean, readable, and responsive**.

Allowed Resources

- Students may consult the **official Flutter documentation**: <https://api.flutter.dev/index.html>
- No external code copying; only use documentation for guidance.

Deliverables

- A working Flutter project.
- The app must compile and run without errors.
- The UI must demonstrate correct usage of the listed widgets.
